

SOLUTION BROCHURE

ApexTMS

Multi-vendor Terminal Management

One platform for the applications and configuration of your whole terminal fleet, whatever the vendor: profiles from templates, card routing by card range, and downloads only when something has changed.

ISO/IEC 27001 CERTIFIED

PCI S3 CERTIFIED

WHY APEXTMS

Configure once, update remotely

ApexTMS keeps the parameter profile of every terminal in one place. Each profile is a tree: the terminal at the top, then each acquirer with its own merchant and terminal IDs, then the card issuers and BIN ranges it serves, alongside receipt texts, chip-card settings and host connections.

Terminals from different vendors fetch their profile and application through the Apex Payment Gateway. The gateway sends a new profile only when something has changed, so terminals download only when they need to.

1 system

Mixed terminal estates from different vendors, managed together.

Templates

New terminal profiles start from ready-made templates.

On change

A new profile is sent only when something has changed.

KEY BENEFITS

Built for acquirers, operations and product teams

Acquirers & banks

- ✓ Launch services remotely: new applications and parameters reach terminals without a site visit.
- ✓ Vendor independence: run mixed terminal estates from one system.
- ✓ Lower operating cost: central configuration replaces on-site setup.

Operations teams

- ✓ Faster onboarding: new terminals are set up from ready-made templates.
- ✓ New profiles fill in terminal and merchant IDs and the merchant's receipt details automatically.
- ✓ See which terminals have downloaded the latest profile and which have not.

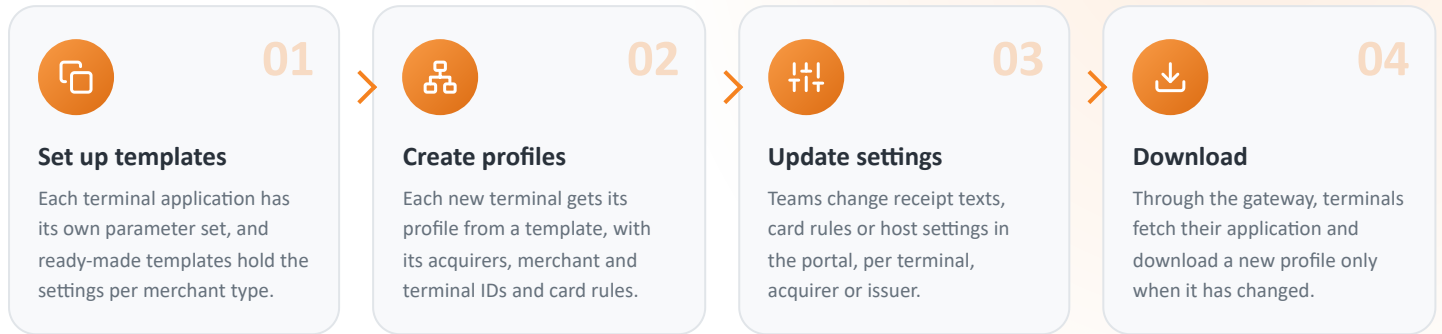

Card & product teams

- ✓ Route each card range to the right acquirer, issuer rules and host IDs.
- ✓ Set PIN, floor-limit and blocking rules for each card issuer.
- ✓ Switch tips, pre-authorisation and ApexDCC on or off per terminal.

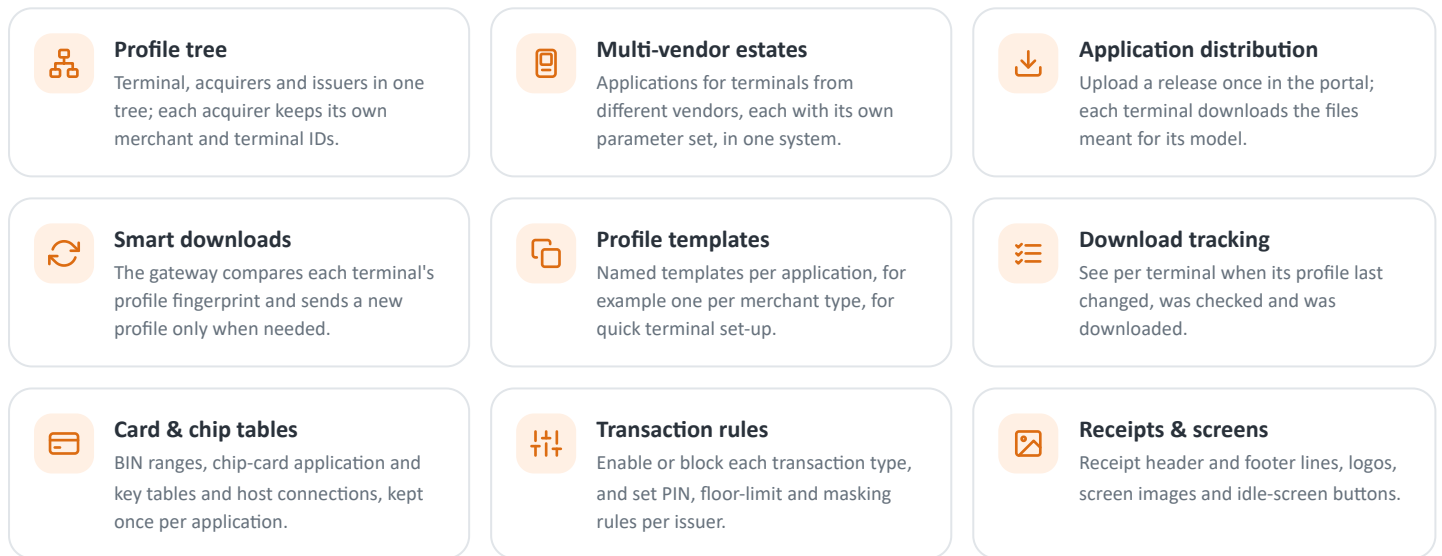

HOW IT WORKS

From template to terminal

PLATFORM FEATURES

Everything needed to manage a terminal estate

IDEAL FOR

 Acquirers

 Banks

 Payment service providers

 Mixed terminal estates

 Operations teams

PLATFORM

Built on the Apex Payment Gateway

ApexTMS runs in the same gateway and portal as your terminal estate. Each institution keeps its own profiles, and every transaction reads the live profile.

Card routing by BIN

A card's BIN range selects the acquirer, the issuer rules and the host IDs.

Managed roll-out

Apex handles terminal staging, TMS profiles and remote deployment to the fleet.

Works with ApexRPM

Ask chosen terminals to fetch their latest configuration or application remotely.

Per-institution profiles

Each institution keeps its own applications, templates and terminal profiles.

Let's talk payments.
